

Thaufiq Ahmed

Full Stack Developer

9943337678 | thaufiq.dev@gmail.com | [LinkedIn](#)

Full-Stack Developer with 2+ years of hands-on experience building scalable web applications using Java, Spring Boot, C#, .NET Core, React, and Azure services. Experienced in API development, cloud integration, performance optimization, and delivering production-ready solutions in Agile teams.

Technical Skills

Programming Languages: Java, C#, JavaScript, TypeScript.

Frontend: React, Tailwind CSS, Bootstrap, HTML, CSS

Backend: Spring Boot, .NET Core, REST APIs, GraphQL

Databases: MySQL, SQL Server, Oracle

Tools & Platforms: Azure Services, Git, GitHub, Postman, Swagger, Maven, Visual Studio, IntelliJ

Concepts: Microservices, API Integration, Cloud Automation, Performance Optimization

Professional Experience

Full-Stack Developer – Modern Web Development

JumpStartNinja Technologies - Chennai, TN

July 2024 – Present

- Developed and integrated **RESTful** APIs with **GraphQL** and **microservices** to fetch and manage historical data from client databases.
- Enabled seamless inter-service communication by **integrating** multiple microservices within the API architecture.
- Built high-performance backend services, capable of efficiently processing millions of records for analytical client reports.
- Enhanced data retrieval performance by **85%** through **query optimization**, **indexing** and table **partitioning**.
- Created responsive, dynamic and reusable UI components, ensuring smooth API-driven data rendering.
- Implemented robust authentication, validation, and exception handling across distributed microservice architectures.
- Performed debugging, unit testing, and API testing to ensure code quality, reliability, and performance optimization across microservices.
- Designed and delivered end-to-end full-stack solutions.
- Integrated **Azure Document Intelligence** and **Azure OpenAI** for intelligent document processing and automation.

Software Developer

MatrixSoft Innovations Pvt. Ltd. - Chennai, TN

March 2024 – June 2024

- Built an SME-focused web application to manage GST invoices, sales, purchases, and ledger reports.
- Designed and developed responsive UI screens for sales, product, and invoice workflows.
- Developed and integrated REST APIs for end-to-end sales processing, including order creation, billing, and ledger updates.
- Implemented backend APIs to add, update, and manage product catalogs, ensuring seamless frontend–backend integration.
- Collaborated with backend and QA teams to ensure **data accuracy**, **validation**, and **smooth user experience**.

Education

ST JOSEPH College of Engineering

B.Tech - Information Technology

Chennai, India

2019 -2023

Signature Projects

1. Incentives State Machine – Amaron Batteries (Client Project)

- Designed and implemented a state-machine–based incentive system from scratch, defining end-to-end workflow structure, state transitions, and validation rules.
- Built configurable filters and transition logic to control incentive eligibility, approvals, and status movement based on business rules.
- Ensured data consistency and rule enforcement across multiple incentive states through well-defined transition handling.

2. ACS GraphQL – Amaron Batteries (Client Project)

- Developed a GraphQL-based service to fetch historical data from client databases.
- Integrated GraphQL with existing REST APIs to deliver customized and optimized responses based on business needs.
- Implemented authentication, authorization, and token validation mechanisms to ensure secure user access.
- Integrated the service with the existing DSM application for real-time data retrieval and synchronization.
- Designed and wrote GraphQL schemas and resolvers to query client-specific tables and data structures efficiently.

3. Read Replica – Amaron Batteries (Client Project)

- Developed RESTful APIs to fetch and serve millions of records from client databases for frontend reports and analytics dashboards.
- Wrote optimized SQL queries to improve data fetch efficiency and reduce response time.
- Implemented load-balanced data streaming services to handle high-volume concurrent requests.
- Optimized existing queries by adding custom indexing and table partitioning, achieving a significant performance improvement in data retrieval speed.
- Ensured scalability and reliability through performance tuning and query-level optimizations.

4. CBSE Document Automation – EdTech Client (Client Project)

- Automated backend data extraction and validation using Azure Form Recognizer.
- Trained and fine-tuned document extraction models to improve field-level accuracy for marks, subjects, and totals.
- Implemented fuzzy / rule-based validation (FOSSI-style logic) to detect mismatches, missing values, and inconsistent data during extraction.
- Designed and wrote custom prompts and extraction rules to accurately capture structured data from semi-structured documents.
- Achieved 92% extraction accuracy, significantly reducing data loss and incorrect mappings.

5. Inspection One – Company Product (Internal Platform)

- Worked on the product from joining, contributing across both frontend and backend.
- Replaced an existing Power BI dashboard by designing and developing a custom React dashboard for greater flexibility and customization.
- Designed and implemented REST APIs to fetch, aggregate, and serve inspection and site performance data.
- Designed and developed the screen monitoring module from scratch, enabling seamless interaction with the mobile application.
- Implemented WebRTC-based APIs to support real-time video streaming and live monitoring.
- Implemented API-level logging and log management for better monitoring and debugging.
- Handled client-reported issues, performed quick bug fixes, and tested applications and APIs to ensure stability.
- Created and maintained API-level documentation to support frontend, mobile, and future development teams.

Certifications

- **Java Full Stack Development** - Pentagon Space
- **Java Training** - Besant Technologies
